The screenshot shows a search bar with 'lung cancer' entered. Below the search bar, there are three columns of suggestions: 'Suggestions', 'Books and Journals', and 'Authors'. The 'Suggestions' column lists terms like 'lung cancer', 'non-small cell lung cancer', 'secondary malignant neoplasm of lung', 'small cell carcinoma of lung', 'Adenocarcinoma of lung', 'primary lung cancer', 'Lung neoplasm screening', and 'Squamous cell carcinoma of lung'. The 'Books and Journals' column lists 'Lung Cancer' and 'Clinical Lung Cancer'. The 'Authors' column lists various groups like 'Lung Cancer Alliance', 'Leuven Lung Cancer Group', 'London Lung Cancer Group', 'Lung Cancer Cooperative Group', 'Lung Cancer Oncogenome Group', 'Lung Cancer OncoGuia Group', 'Lung Cancer Surgery Expert Panel', 'Lung Cancer Working Group', and 'French Lung Cancer Group'. On the left side of the screenshot, there is a blue box with the text 'Lead with answers ClinicalKey that thinks ; LEARN MOR'.

Disease Overview

[View Full Topic](#)

Goldman-Cecil Medicine · Goldman, Lee, MD; Schafer, Andrew I...

Definition

Lung cancer, or bronchogenic carcinoma, is a proliferative malignant neoplasm arising from the primary respiratory epithelium. Lung cancer is generally divided into two major histologic groups: *non-small cell lung cancer* (NSCLC), which accounts for approximately 85% of all lung cancers, and *small cell lung cancer* (SCLC). There are several other less common pulmonary neoplasms including carcinoid tumors, primary soft tissue sarcomas of the lung, pulmonary blastomas, and

The search bar is available from any screen, so you can use Scoped Search at any time.

# Journal Articles Search

The screenshot shows the ClinicalKey search interface. The search term 'diabetes mellitus' is entered in the search bar. The left sidebar contains a 'Filter By' section with 'Source Type' expanded, showing options like 'MEDLINE® Article' (16807) and 'Full Text Articles' (24522). The main results area shows 41329 results, sorted by Relevance. The first result is 'Metformin versus Placebo in Obese Pregnant Women without Diabetes Mellitus' from The New England journal of medicine. Annotations include a red box around the 'Source Type' filter, a red box around the 'Download PDF' button, a red box around the 'Save, Email, and Print' icons, and a yellow callout box pointing to these icons with the text 'Save, Email, and Print icons for easy sharing and saving'. The right sidebar shows a 'Diabetes Mellitus' overview section with a 'View Full Topic' link.

# Book Chapter Search

The screenshot shows the ClinicalKey search interface. At the top, the search term 'diabetes mellitus' is entered in the search bar. The results are filtered to show 41,329 results, sorted by Relevance. A red arrow points to the first result, 'Metformin versus Placebo in Obese Pregnant Women without Diabetes Mellitus', which is a MEDLINE® article. Below it is a 'FULL TEXT ARTICLE' titled 'Le diabète pendant la grossesse' from the Journal of Obstetrics and Gynaecology Canada (JOGC). The right sidebar shows the 'Diabetes Mellitus' topic overview, including a definition and a table of comparison.

Disease Overview   
Ferri's Clinical Advisor 2017 · Ferri, Fred F., M.D., F.A.C.P.  
Definition   
• Diabetes mellitus (DM) refers to a syndrome of hyperglycemia resulting from many different causes (see "Etiology"). It is broadly classified into type 1 and type 2 DM. The terms "insulin-dependent" and "non-insulin-dependent" diabetes are obsolete because when a person with type 2 diabetes needs insulin, he or she remains labeled as type 2 and is not reclassified as type 1. Table 1D-8 provides a general comparison of the two types of DM.

Gold Standard Drug Monograph

Monograph

**Description:** Acetaminophen (APAP, paracetamol) is a para-aminophenol analgesic and the active metabolite of phenacetin. Due to the toxic effects of phenacetin at therapeutic doses and the availability of acetaminophen, phenacetin is no longer used. Acetaminophen possesses analgesic and antipyretic activity similar to aspirin; however, acetaminophen has no peripheral antiinflammatory activity or effects on platelet function. Acetaminophen was first used in clinical medicine in the 1890's. It is effective in the relief of both acute and chronic pain and may be preferred over NSAIDs due to fewer hematologic, GI, and renal effects. Acetaminophen is the preferred analgesic/antipyretic for patients in whom aspirin is contraindicated and in those with underlying renal disease for episodic, though not chronic, use. [More](#)

Acetaminophen possesses analgesic and antipyretic activity similar to aspirin; however, acetaminophen has no peripheral antiinflammatory activity or effects on platelet function. Acetaminophen was first used in clinical medicine in the 1890's. It is effective in the relief of both acute and chronic pain and may be preferred over NSAIDs due to fewer hematologic, GI, and renal effects. Acetaminophen is the preferred analgesic/antipyretic for patients in whom aspirin is contraindicated and in those with underlying renal disease for episodic, though not chronic, use.<sup>23977</sup> In addition, acetaminophen has been recommended by the American Lung Association as the first line treatment for aches and pains associated with the flu, by the American Geriatrics Society for both minor and persistent pain in elderly patients<sup>35814</sup>, and by the American College of Rheumatology as first-line therapy for osteoarthritis of the hip or knee<sup>35978</sup>. The drug has a history of safe and effective use; however, unintentional or intentional misuse of acetaminophen is the number one cause of acute hepatic failure in the U.S.<sup>32202</sup> Acetaminophen was first approved by the FDA in 1950. Intravenous acetaminophen (Ofirmev) was approved by the FDA in November 2010 for the treatment of pain and fever in adults, adolescents, and children over the age of 2 years.<sup>42289</sup>

**Mechanism of Action:** The exact mechanism of action is unknown, but acetaminophen is thought to mediate

# Drug Monographs

The screenshot shows a search interface for 'migraine' with 67 results. The results are filtered by 'Drug Monographs' and sorted by 'Relevance'. The top results are:

- Acetaminophen**: Gold Standard. Published September 20, 2016.
- Ibuprofen**: Gold Standard. Published September 20, 2016.
- Aspirin, ASA**: Gold Standard. Published September 17, 2016.

Below the results, there are 'Searches related to migraine' including 'migraine with aura', 'Common Migraine', 'cluster headaches', 'Transformed migraine', 'antimigraine agent', and 'Migraine prophylaxis'.

The right sidebar shows the 'Migraine' disease overview, including a 'View Full Topic' link, 'Ferri's Clinical Advisor 2017 - Ferri, Fred F., M.D., F.A.C.P.', and a 'Definition' section. The definition states: 'Migraine headaches are recurrent headaches that are either preceded by a focal neurologic symptom (migraine with aura), occur independently without preceding focal neurologic symptoms (migraine without aura), or have atypical presentations (migraine variants). The migraine aura typically is characterized by visual or sensory symptoms that develop over 5 to 60 min. If aura includes motor weakness, the migraine is referred to as hemiplegic. In migraine with and without aura, the headache is typically unilateral, pulsatile, and associated with nausea and vomiting, photophobia, and phonophobia. Migraines that occur  $\geq 15$  days every month for  $\geq 3$  months are known as chronic; otherwise, they are referred to as episodic.'

Overview

If you just found out you have diabetes, you probably have a lot of questions and you may feel a little uncertain. But you're not alone. In the United States, 23.6 million people have diabetes. Most of these people lead full, healthy lives. One of the best things you can do for yourself is to learn all you can about diabetes. This article will tell you some of the basics about diabetes.

What is diabetes?

Diabetes is a disease that occurs when a person's body doesn't make enough of the hormone insulin or can't use insulin properly. There are 2 types of diabetes. Type 1 diabetes occurs when your body's pancreas doesn't produce any insulin. Type 2 diabetes occurs when the pancreas either doesn't produce enough insulin or your body's cells ignore the insulin. Between 90% and 95% of people who are diagnosed with diabetes have type 2 diabetes.

What is type 1 diabetes?

Type 1 diabetes is also called insulin-dependent diabetes. It is sometimes called juvenile diabetes because it is usually discovered in children and teenagers, but adults may also have it.

# Creating Presentations from ClinicalKey

- **To add images to the Presentation Maker:**
- 1. From the HTML page of articles, books and Multimedia, click the Add to Presentation to the right of the images you want to add to the Presentation Maker. The Add to Presentation window opens.
- 2. Select the presentation you want to add images to, or click Create New Presentation to start a new presentation.
- 3. Click Save to add your images to the selected presentation.
- You can also select Save and go to Presentations Page to go directly to the presentations page and view your content.

# Creating Presentations from ClinicalKey

The screenshot shows the ClinicalKey search interface for 'childhood asthma'. The search bar contains 'childhood asthma' and the results are filtered to 'Videos' and 'Images'. A red arrow points to the 'Add to Presentation' icon (a document with a plus sign) in the top right corner of the search results area. Below the search results, a detailed diagram of asthma pathogenesis is visible, showing the airway lumen, subepithelial fibrosis, and various immune cells like T cells, B cells, mast cells, and eosinophils. A red arrow also points to the 'Add to Presentation' icon on the diagram's toolbar.

The screenshot shows the 'Add to Presentation' dialog box. The title is 'Add to Presentation'. Below the title, the text 'hypertension' is displayed with a dropdown arrow. Underneath, the text 'Save and go to Presentations Page' is shown. At the bottom right, there are two buttons: 'Cancel' and 'Save'.

# Procedures consult

The screenshot shows the ClinicalKey search interface. The search term 'Knee surgery' is highlighted in a red box. The search results are filtered to show 15 results, sorted by Relevance. The first three results are:

- PROCEDURES CONSULT  
**Femoral Nerve Block (Anesthesia)**  
Lee A Fleisher. Published March 2, 2008.

FULL DETAILS

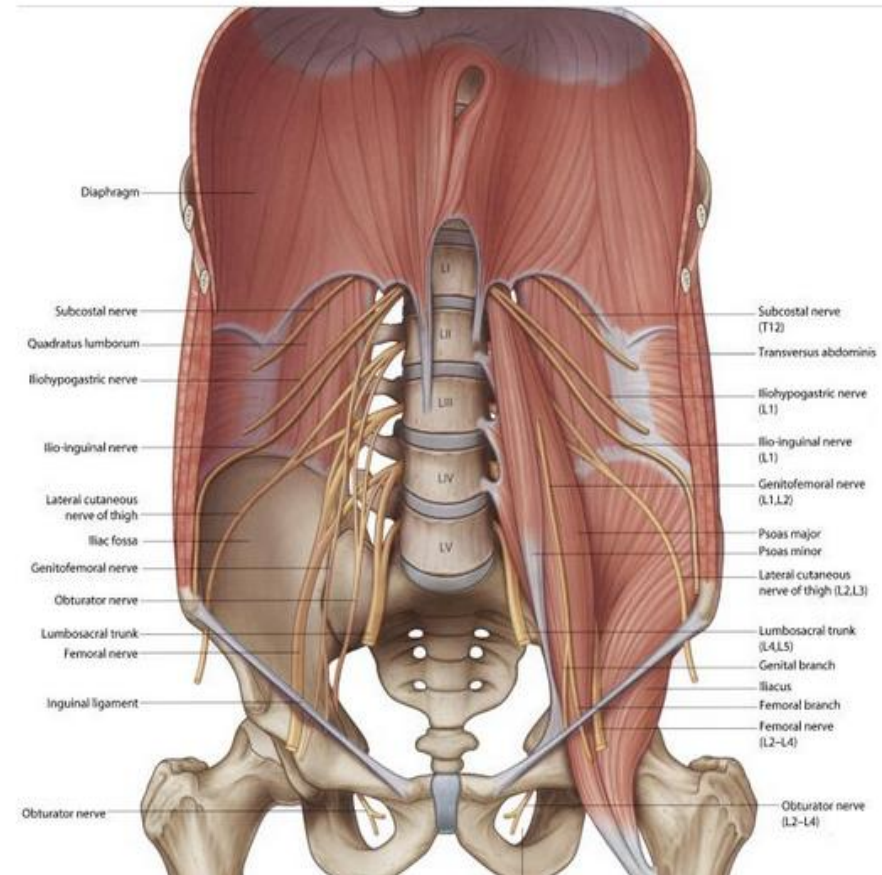

# Procedures consult

## EQUIPMENT

- o Choice and concentration of agent is based on whether surgical anesthesia or pain management is desired, because lower concentrations of local anesthetic are required for pain management.
- o Long-acting local anesthetics are a poor choice for ambulatory surgery for minor procedures, because prolonged motor blockade of the quadriceps muscle prevents ambulation and predisposes the patient falls if he or she attempts to ambulate too early.

Disease Overview [View Full Topic](#)  
Ferri's Clinical Advisor 2017 · Ferri, Fred F., M.D., F.A.C.P.

Definition [^](#)

The National Asthma Education and Prevention Program (NAEPP) guidelines define asthma as “a chronic inflammatory disease of the airways in which many cells and cellular elements play a role: in particular mast cells, neutrophils, eosinophils, T lymphocytes, macrophages, and epithelial cells. In susceptible individuals, this inflammation causes recurrent episodes of coughing (particularly at night or early in the morning), wheezing, breathlessness, and chest tightness. The episodes are usually associated with widespread but variable airflow obstruction that is reversible either spontaneously or as a result of treatment.” **Status asthmaticus**, or acute severe asthma, is a refractory state that does not respond to standard therapy such as inhaled beta-agonists or subcutaneous epinephrine. It may persist for several hours. [More](#)

# Guidelines

The screenshot displays the ClinicalKey website interface. At the top, the 'ClinicalKey' logo is on the left, and 'English' and 'CME 0.5' are on the right. Below the logo is a navigation bar with 'All Types' and a search bar containing the text 'Search for diagnoses, conditions, drugs and more...'. To the right of the search bar are links for 'Books', 'Journals', and 'More'. The main content area is divided into a left sidebar and a main panel. The sidebar lists various sections: 'Introduction and overview', 'List of quality statements', and nine individual quality statements from 1 to 9, each with a brief description. The main panel features a 'GUIDELINE' header followed by the title 'Asthma (QS25)' and the source 'National Institute for Health and Care Excellence (NICE)'. Below this is the section 'Introduction and overview', which contains a paragraph stating that the quality standard covers the diagnosis and treatment of asthma in adults, young people, and children aged 12 months and older. It also includes three numbered references: [1] British Occupational Health Research (2010) Occupational asthma: prevention, identification and management: systematic review and recommendations; [2] Asthma UK (accessed November 2012) Facts for journalists; and [3] Department of Health (2011) Outcomes strategy for chronic obstructive pulmonary disease (COPD) and asthma in England. The 'Introduction' section begins with a paragraph defining asthma as a long-term condition affecting the airways in the lungs in children, young people, and adults, with classic symptoms including breathlessness, tightness in the chest, coughing, and wheezing.

All Types Search for diagnoses, conditions, drugs and more... Books Journals More

**GUIDELINE**  
**Asthma (QS25)**  
National Institute for Health and Care Excellence (NICE)

**Introduction and overview**  
This quality standard covers the diagnosis and treatment of asthma in adults, young people and children aged 12 months and older. For more information see the [scope](#) for this quality standard.

[1] [British Occupational Health Research \(2010\) Occupational asthma: prevention, identification and management: systematic review and recommendations.](#)

[2] [Asthma UK \(accessed November 2012\) Facts for journalists.](#)

[3] [Department of Health \(2011\) Outcomes strategy for chronic obstructive pulmonary disease \(COPD\) and asthma in England.](#)

**Introduction**  
Asthma is a long-term condition that affects the airways in the lungs in children, young people and adults. Classic symptoms include breathlessness, tightness in the chest, coughing and wheezing. The goal of management is for people to be free from symptoms and able to lead a normal, active life. This is achieved partly through treatment

## MPDL3280A With Chemoradiation for Lung Cancer

First received on August 14, 2015. Last updated on June 28, 2016.

### Purpose

The goal of this clinical research study is to learn about the safety of adding MDPL3280A to standard chemotherapy (a combination of carboplatin and paclitaxel) and radiation in patients with lung cancer.

Status	Recruiting
Condition	Lung Cancer
Phase	Phase 2
Study Type	Interventional
Study Design	Allocation: Non-Randomized, Endpoint Classification: Safety/Efficacy Study, Intervention Model: Crossover Assignment, Masking: Open Label, Primary Purpose: Treatment
Official Title	DETERRED: PD-L1 blockadE To Evaluate the Safety of Lung Cancer Therapy Using Carboplatin, Paclitaxel, and Radiation CombinEd With MPDL3280A

Further study details (as provided by National Institutes of Health Clinical Center)

# First Consult

The screenshot shows the ClinicalKey interface for a search on 'hiv'. The search results are sorted by relevance and show 17 results. The first three results are highlighted as 'FIRST CONSULT' items:

- FIRST CONSULT HIV/AIDS**  
Baligh R Yehia, MD, MPP, MSHP, Assistant Professor of Medicine at the Hospital of the University of Pennsylvania and the Veteran's Administration Medical Center, Philadelphia, Pennsylvania; Lindsey Marcellin, MD, MPH. Published November 2, 2013. Last updated October 31, 2013.
- FIRST CONSULT HIV in pregnancy**  
Margaret Trexler Hessen, MD. Published June 20, 2012. Last updated June 14, 2012.
- FIRST CONSULT Neurologic complications of HIV-1 infection**  
Jennifer L. Lyons, MD, Brigham and Women's Hospital, Harvard Medical School, Boston, Massachusetts. Published September 24, 2013. Last updated September 22, 2013.

Below the results, there are 'Searches related to hiv' including: HIV infection, HIV screen, urticaria, HIV prevention, human immunodeficiency virus transmission, and Anti-HIV Agents.

- *First Consult* is an authoritative evidence-based and continuously updated clinical information resource for healthcare professionals.

**Key points**

- **Human immunodeficiency virus (HIV) infection is caused by either human immunodeficiency virus 1 (HIV-1) or 2 (HIV-2). These viruses target specific subsets of T cells and eventually cause immune dysfunction. In the advanced stages, the disease is characterized by the occurrence of a number of opportunistic infections not usually seen in persons with normal immune function. This advanced stage is referred to as Acquired Immune Deficiency Syndrome or AIDS**
- **The routes of HIV transmission include sexual contact, intravenous drug use, vertical transmission, and occupational exposure. The blood supply of the U.S. is safe; however, blood may not be screened in all other countries**
- **Various U.S. Food and Drug Administration (FDA)–approved screening tests that yield rapid results are recommended in certain high-risk population groups. The Centers for Disease Control and Prevention (CDC) and the U.S. Preventive Services Task Force (USPSTF) recommend screening in the general population of persons aged 13 to 64 years, or 15 to 65 years, respectively**
- **The two most commonly used diagnostic modalities in HIV are enzyme-linked immunosorbent assay and Western blot test**
